

ADHD MEDICATION FOLLOW-UP CARE

Measure demonstrates the percent of children ages 6-12 newly prescribed an ADHD medication that had at least three follow-up care visits within a 10-month period, one of which was within 30 days of when the first ADHD medication was dispensed. The intent of the measure is to assess medication impact and side effects and therefore, visits with a counselor does not count. The visit should be with a practitioner with prescribing authority. Two rates:

INITIATION PHASE: one face-to-face outpatient follow-up visit with a prescribing practitioner within 30 days after the date the ADHD medication was newly prescribed.

HOW TO IMPROVE HEDIS SCORES

- When prescribing a new medication to your patient, be sure to schedule a follow-up visit within 30 days to assess how the medication is working. Schedule this visit while your patient is still in the office.
- Schedule two more visits in the 9 months after the first 30 days to continue to monitor your patient's progress.
- You should not continue these controlled substances without at least 2 visits per year to evaluate a child's progress and ensure they are on the correct dosage.
