Ketogenic Diet Initiation Care Guideline

Inclusion Criteria: a patient who is deemed a candidate by a child neurologist and the multidisciplinary team in the Ketogenic Diet Clinic and who have met the following:
- Failed 2 or more appropriately chosen antiepileptic medications
- Compliant with antiepileptic drug regimen
- Completed screening labs: serum amino acids, urine organic acids, acyl carnitine profile, lactate, pyruvate, and ammonia
- Parental consent and interest/motivation

Exclusion Criteria: malnourished, non-compliance with antiepileptic drug regimen, defect in fatty acid oxidation

Assessment
- Vital signs per unit standard of care
- Weights on Monday and Thursday

Interventions
- 24 hour VTM upon admission for baseline seizure quantification
- Seizure precautions
- Continue prescribed antiepileptic drugs
- Pharmacy to change all medications to lowest CHO form.
- Lab: CMP + Phos on admit, BMP + CA ™ daily, serum Ketones (KET) daily beginning on day 2
- Accucheck q 4 hrs
- If blood glucose < 40 mg/dL or patient symptomatic, give 15 mL juice and recheck in 30 minutes (repeat as necessary until > 50 mg/dL). If NPO, give 0.25 gm/kg D10W. Notify provider
- If intractable hypoglycemia (3 episodes of BG < 40 mg/dL within 24 hrs), consider D2.5W-D5W continuous infusion to maintain blood glucose 50-80mg/dL
- Monitor for acidosis; treat if symptomatic and/or C02 < 20 mmol/L X2 with oral sodium bicarbonate, 1 meq/kg BID
- Urine ketones, specific gravity, and pH q void; if specific gravity > 1.030 consider IV fluid bolus (no dextrose)
- Ketogenic diet – PO (Modified diet) or Enteral (ketogenic recipe) (see p. 2)
- Fluids – maintenance divided throughout the day (caffeine & calorie free). If NPO, provide maintenance IVF (no dextrose)
- Consults: Nutrition, Social Service, and Child Life; Psychology PRN

Goals
- Urine ketones: 80-160 mg/dL (mod to large)
- Ketones (Beta-Hydroxybutyrate): 40-80 mg/dL (4-8 mmol/L)
- Urine specific gravity: 1.010-1.020
- Blood glucose: 50-80 mg/dL
- Urine pH: 6-8
- CO2 ≥ 20 mmol/L

Discharge Criteria
- Consumed and tolerated 3 full strength keto meals or feedings at goal ratio
- Normoglycemic (> 50 mg/dL) for previous 12 hrs
- Parents have all necessary supplies (gram scale, formula, medications, urine dipsticks
- Parental education complete; successful return demonstration
- Order ketostix, measure urine ketones BID.
- Order all medications through CHOC OP pharmacy; Ensure keto-friendly dosage forms (eg. Tablet/capsule or carb-free liquid)
- Order vitamin/mineral supplements through CHOC OP pharmacy (see RD note)

Recommendations/Considerations/Information
- The ketogenic diet is a high fat, low carbohydrate diet that has been employed as a treatment for medically refractory epilepsy since the 1920’s
- The ketogenic diet reduces seizures in up to two-thirds of children refractory to anticonvulsant drugs
- The diet mimics the biochemical changes associated with starvation and induces, among other changes, production of ketone bodies (mainly beta hydroxybutyrate, and to lesser extent, acetoadetate and acetone), which has been implicated in the mechanisms of seizure control
- The ketogenic diet is strictly calculated requiring family to weigh all food consumed. The family and social structure of the patient is critical to its success. If the family cannot help maintain complete compliance, ketosis cannot be achieved
- Patients are scheduled for a 4 – 5 day admission for ketogenic diet initiation

Patient/Family Education

Education by RN
- Urine ketone testing
- Urine specific gravity testing

Education by RD
- Ketogenic Diet: Parents’ Guide
- Meal plan, vitamins and minerals
- Fluids
- Ketogenic food prep
- Reading labels
- Monitoring and sick day
- Refer to CharlieFoundation.org
- Review Common Drug Information Questions (KD Pharmacist)
Ketogenic Diet Initiation Care Guideline

**Ketogenic Oral (PO) Diet**

**Day 1**
- Breakfast
  - No concentrated sweets (NCS) diet at home + 240 mL of fluid
- Remaining Meals
  - Provide ketogenic meals at 1:1 ratio, goal calories

**Day 2**
- Ketogenic meals 2:1 ratio, goal calories

**Day 3**
- Ketogenic meals 3:1 ratio, goal calories

**Day 4**
- Advance to ketogenic 4:1 ratio or goal ratio, at goal calories

**Ketogenic Enteral Diet**

**Day 1**
- Breakfast
  - Usual formula feeding at home
- Remaining meals:
  - Full strength ketogenic formula at 1:1 ratio

**Day 2**
- Full strength ketogenic formula at 2:1 ratio

**Day 3**
- Full strength Ketogenic formula at 3:1 ratio

**Day 4**
- Advance to full strength ketogenic 4:1 ratio or goal ratio
