

## Updating the Zoom Client

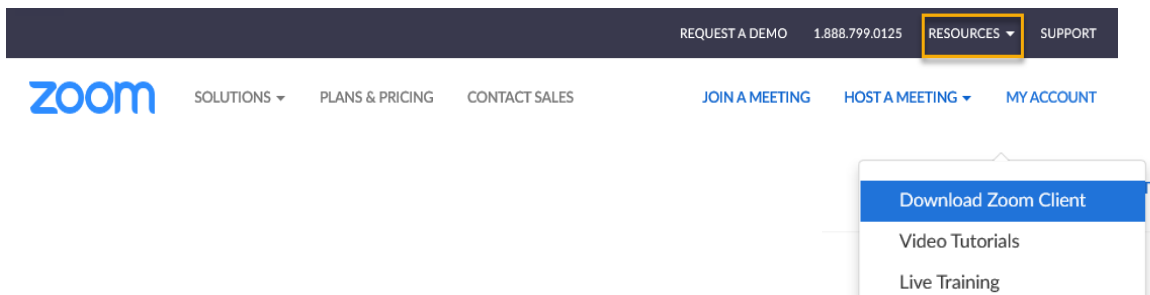

\*Beginning May 30, 2020, all Zoom users must be on Zoom Version 5.0 + in order to join any meeting. Anytime there is a new update, you may follow the same steps to download it onto your computer. Please note there are two ways to update, so if Option A does not work on your device, please try Option B.

### OPTION A: Download from Website

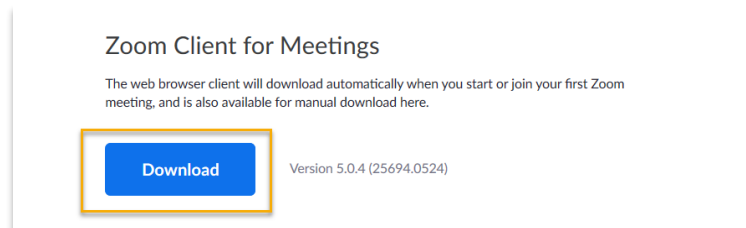

1. Go onto any internet browser and type in the website: [zoom.us](https://zoom.us):

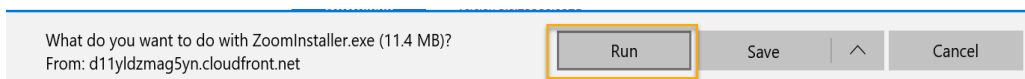

2. Click **RESOURCES** in the upper right-hand corner and **Download Zoom Client** in the drop-down menu.

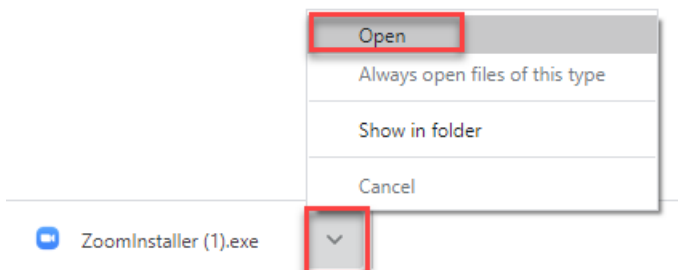

3. Download the client from the Download Center by clicking the blue **Download** button.

4. Run the Installer to download and run the update.

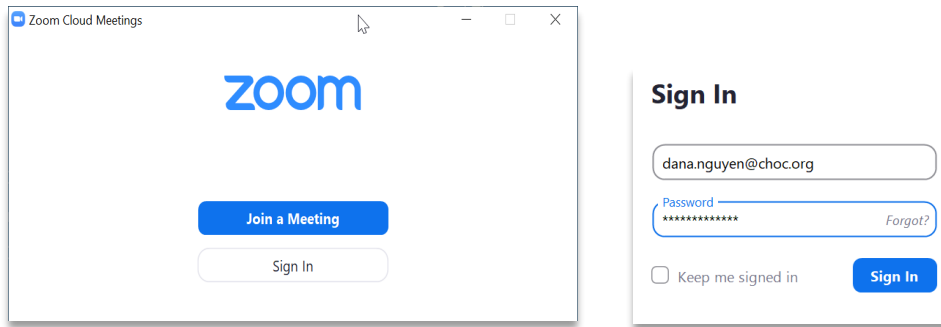

\* If you do not see this banner, the download may appear in the bottom left screen instead. Select the arrow button. Then **Open** to automatically download.

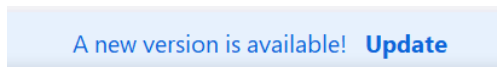

**OPTION B:** Check for Updates from within the Zoom Client.

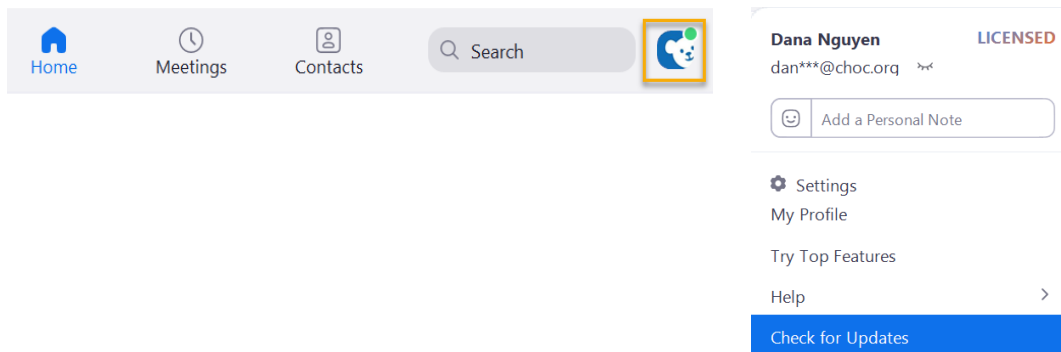

1. Launch your Zoom Client and sign in.

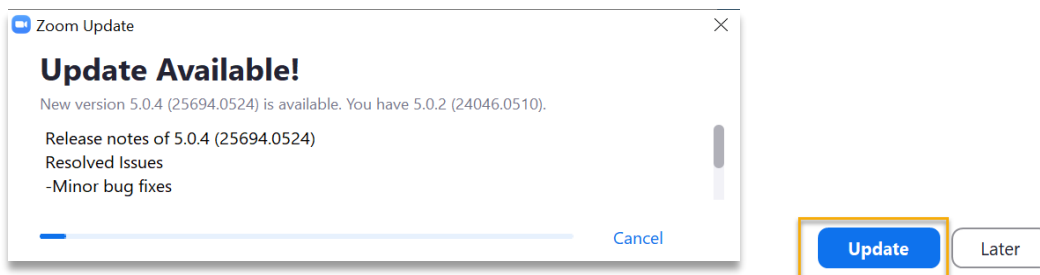

2. If you see the light blue banner, click **Update**.

3. Otherwise click your profile icon in the upper right-hand corner and **Check for Updates** in the drop-down menu.

4. Allow Zoom to search for updates, then click the blue **Update** button. Zoom will update and restart.

5. Then you can verify which version you have by looking at the Zoom Client before you log in.
